Our process is divided into six stages:

First: Selection of the raw material.

Second: The base slurry is made by mixing the raw material and an aqueous solution.

Third: Moulding (mould and countermould).

Fourth: Part line drying oven.

Fifth: Pressing and optional cutting.

Sixth: Quality control.

TECNOLOGY

HARDPulp

USUALPulp

QUALITY Pulp

We use different technologies depending on the product requirements.

HARDpulp is used when we want to achieve a product with high rigidity and stability even under high stress.

USUALpulp is used when we want to achieve a mass production product that is easy to handle due to its lightness.

QUALITYpulp is used when we want to achieve a product with a smoother surface and a more elegant and precise finish.
